

Magic Xtal Ltd.

# OVEN CONTROL CRYSTAL OSCILLATORS

September, 2018

## Utmost OCXOs Solutions!

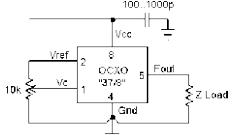

Being the world leader in the Internally Heated Resonator (IHR) technology Magic Xtal has created unique **MXO37** series providing in (-40 +85)°C range up to 2 ppb temperature stability and -173 dBc/Hz noise floor at less than 180 mW power consumption and about 2 ccm volume. Utmost stability of the low power OCXOs is implemented in **MXO37/R** model packaged in 20x20x12.9 mm case and exhibiting 0.5 ppb temperature stability along with as low as 0.1 ppb/day aging.

In the field of ultra-high stability OCXOs Magic Xtal offers the double-oven **MXODE** model with 0.05 ppb frequency stability in (-40 +85)°C range and the smallest in the class **MXODR** oscillator providing at 5 ccm packaging 0.1 ppb temperature stability and 0.1 ppb/day aging rate.

Moreover, portfolio of the company includes high stability low phase-noise OCXOs of **MXOC** and **MXOH** series in a variety of small packages, high durable low power oscillators withstanding up to 1000g mechanical shocks and other OCXO solutions with customized combination of advanced performances.

## High stability OCXOs of Magic Xtal production:

	Ultra low power high stability DIP8 compatible OCXOs <b>MXO37/8U, MXO37/8P</b> models	4
	Ultra low power high stability DIP14 compatible OCXOs <b>MXO37/14U, MXO37/14P</b> models	6
	Ultra low power high frequency DIP14 compatible OCXOs <b>MXO37H/14, MXO37H/14U</b> models	8
	Ultra low power shock resistant DIP8, DIP14 compatible OCXOs <b>MXO37/8D, MXO37/14D, MXO37H/14D</b> models	10
	Ultra low power ultra-high stability hermetically sealed OCXOs <b>MXO37/R, MXO37/RU, MXO37H/R, MXO37H/RU</b> models	12
	Ultra-high stability double-oven OCXOs <b>MXODE</b> model	14
	Ultra-high stability miniature double-oven OCXOs <b>MXODR</b> model	16
	High stability low phase noise OCXOs <b>MXOC</b> series	18
	High stability high frequency OCXOs <b>MXOH</b> series	20
	Packaging, drawings and electrical connections	22

# Ultra low power high stability DIP8 compatible OCXOs

## MXO37/8U and MXO37/8P models

The design of the **MXO37** family is built on a new generation of the Internally Heated Resonators (IHR) – the devices incorporating inside the TO-8 vacuum holder the crystal plate with integrated oven-control system. Application of the advanced IHR technology provides to the **MXO37** oscillators very small sizes, extremely low power consumption and short warm-up time combined with excellent frequency stability and low phase noise level.

Possessing unique combination of high frequency stability and low phase-noise with miniature sizes and extremely low power consumption the **MXO37/8P** oscillators are perfect frequency reference for various advanced electronic systems, especially portable and/or battery supplied, such as high-end mobile radio, underwater beacons, portable instrumentation, etc.

### Specification

		MXO37/8U	MXO37/8P, MXO37/8PS-T			
Operational frequency range		8 – 100 MHz	8 – 150 MHz			
Output waveform		HCMOS	HCMOS, sine-wave			
Phase noise level, floor		-165 dBc/Hz	-173 dBc/Hz			
Frequency stability within (-40 +85)°C	for 10 MHz	10 ppb	5 ppb			
	for 100 MHz	0.1 ppm	50 ppb			
Allan deviation, 1s		for 10 MHz	5x10 <sup>-12</sup>			
Aging per day/year after 30 days operation	for 10 MHz	0.1 ppb / 15 ppb				
	for 100 MHz	2 ppb / 0.2 ppm				
Input voltage		3.3 V or 5 V				
Power consumption	warm up	0.8 W; 90 mW	0.8 W; <180 mW			
	steady state		< 60 s to 15 s – special option			
Warm up time (to Δf/f=1e-7, at +25°C)		< 60 s	< 60 s to 15 s – special option			
Mechanical durability		Vibration 0-2000 Hz, 10 G; shocks: 30 G, 11 ms				
G-sensitivity		1 ppb/G to 0.2 ppb/G – special option

## MXO37/14P and MXO37/14U models

The **MXO37/14** model as well as the **MXO37/8** oscillators is based on the Internally Heated Resonators (IHR) but has DIP14 compatible sizes and pins-out. At the same extremely low power consumption and fast warming up these devices provide better temperature stability, lower phase-noise level, extended operational frequency range.

The OCXOs operate at up to 150 MHz fundamental frequency at very low spurious level in the output spectra resulting in very low phase jitter.

Being DIP14 compatible in size and pins-out the oscillators are produced in several type packagings including the SMD (**MXO37/14PST**) and low-profile (**MXO37/14L**) 7 mm height version.

Owing to the unique performances the **MXO37/14P**, **MXO37/14U** models are perfect solutions for different portable and/or battery supply devices and other applications where high frequency stability of the OCXO should be combined with its smallest sizes and lowest power consumption.

### Specification

		MXO37/14P, MXO37/14PST	MXO37/14L	MXO37/14U
Operational frequency range		8 – 150 MHz		
Output waveform		HCMOS, sine-wave	HCMOS	HCMOS, sine-wave

## MXO37H/14, MXO37H/14U models

The **MXO37H** oscillators utilize the same internally heated resonator (IHR) designs providing very low power consumption, miniature sizes and fast warming up. In difference from the **MXO37** series it uses the internal frequency multiplication stage enabling extension of the operational frequencies up to 300 MHz and considerable improvement of the temperature stability and aging in 30-150 MHz range.

Owing to the unique performances the **MXO37H/14P** OCXO is perfect solution for high-end portable or/and battery supply devices as well as other modern applications where high frequency stability at high operational frequency of the reference oscillator should be combined with its smallest sizes and lowest power consumption.

### Specification

		Utmost parameters for 100MHz with multiplication by 5	Utmost parameters for 300MHz with multiplication by 3
Operational frequency range		30 – 300 MHz	
Input voltage		3.3 V or 5 V

# Ultra low power shock resistant DIP8, DIP14 compatible OCXOs

**MXO37/8D, MXO37/14D, MXO37H/14D models**

The **MXO37D** is a kind of the low power oscillators of **MXO37** series with essentially strengthened mechanical construction enabling to them extra high resistance to the mechanical factors. Withstanding up to 500g shocks and 30 g wide band vibration the oscillators provide high frequency stability and low phase-noise level combined with very small sizes, low power consumption and short warm-up time.

The **MXO37/8D** and **MXO37/14D** models work in 8-100 MHz frequency range and are designed for different portable or/and battery supply devices and other equipment intended for operation in conditions of severe mechanical factors.

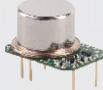

The **MXO37H/14D** version operates in 30-300 MHz range providing improved frequency stability owing to usage of the internal frequency multiplication circuitry.

## MXO37/R, MXO37H/R, MXO37/RU, MXO37H/RU models

The **MXO37/R** oscillators incorporates recent achievements in the IHR technology and the circuitry solutions that enables to them 0.5 ppb frequency stability in wide temperature range, very low aging and low phase-noise combining with less than 180 mW power consumption and 20x20x12 mm package sizes.

The **MXO37H/R, MXO37H/RU** model incorporates besides the internal frequency multiplication circuitry that enables extension of the operational frequencies up to 300 MHz and substantial improvement of the temperature stability and aging in 30-150 MHz range.

Being enveloped in hermetical steel case the oscillators can be employed in harsh environmental conditions (100% humidity, high or low pressure, etc.). The unique parameters of the oscillators make them very attractive for various applications with utmost requirement to the frequency stability associated with battery supply such as underwater equipment for geology or geophysics exploration, portable instrumentation and others.

### Specification

# Ultra-high stability double-oven OCXOs

**MXODE model**

The oscillators of the **MXODE** use the double-oven structure for perfect temperature stabilization of the high precision crystal resonator and the oscillator circuitry. Packaged in standard 36x27x16 mm "europack" and consuming about 1.5 W power the OCXOs provide  $5 \times 10^{-11}$  stability in (-30 +70)°C range, to  $5 \times 10^{-13}$ /1s Allan deviation and  $1 \times 10^{-10}$ /day aging rate.

The **MXODE** can be used as Rb-standard replacement, in Stratum II clocks, instrumentations and in other high-end applications with utmost requirements to frequency stability of the reference oscillator.

## Specification

Operational frequency range	5 – 100 MHz (above 20 MHz – using internal frequency multiplication)	
Input voltage	3,3 V, 5 V or 12V	
Output waveform	HCMOS, sine-wave	
Power consumption	6 W during warming up 1.5 W in steady state	
	<b>Utmost parameters for 10MHz</b>	<b>Utmost parameters for 100MHz</b>
Frequency stability within (-40 +85)°C	0.05 ppb	0.5 ppb
Aging per day/year after 30 days operation	0.1 ppb / 15 ppb	0.5 ppb / 50 ppb
Allan deviation, 1s	to $5 \times 10^{-13}$	$5 \times 10^{-12}$
Sub-harmonics	-	-40 dBc
Warm up time (to $\Delta f/f = 1e-8$ , at +25°C)	5 min	
Mechanical durability	Vibration 0-500 Hz, 5 G; shock 30 G, 11 ms Vibration 0-2000 Hz, 10 G; shock: 100 G, 11 ms - special option	
G-sensitivity	1 ppb/G 0.3 ppb/G - special option

# Ultra-high stability miniature double-oven OCXOs

## MXODR model

The design of the **MXODR** utilizes the Internally Heated Resonator (IHR) additionally heated along with the oscillator circuitry inside the outer oven structure. The double temperature control of the crystal realized with the ordinary outer oven system enables to the oscillators up to 0.1 ppb frequency stability in (-30 +70)°C range at 5 ccm package volume and less than 1 W power consumption.

The **MXODR** oscillators operate in 5-100 MHz range, at above 20 MHz frequencies the internal frequency multiplication can be utilized to increase their temperature and long-term stability. The OCXO applications includes STRATUM II clocks, instrumentations, and other fields with utmost requirements to the frequency stability which before have been satisfied with conventional double-oven OCXOs having much bigger sizes and more power consumptions.

### Specification

Operational frequency range	5 – 100 MHz (above 20 MHz – using internal frequency multiplication)	
Input voltage	3,3 V or 5 V	
Output waveform	HCMOS, sine-wave	
Power consumption	4 W during warming up 1 W in steady state	
<b>Utmost parameters for</b>		
	<b>10MHz</b>	<b>100 MHz (multiplied by 5)</b>
Frequency stability within (-40 +80)°C	0.1 ppb	0.2 ppb
Aging per day/year after 30 days operation	0.1 ppb / 15 ppb	0.5 ppb / 50 ppb
Allan deviation, 1s	$2 \times 10^{-12}$	$1 \times 10^{-11}$
Warm up time (to $\Delta f/f = 1e-7$ , at +25°C)	90 s	
Mechanical durability	Vibration 0-2000 Hz, 10 G; shock 30G, 11 ms	
G-sensitivity	1 ppb/G 0.2 ppb/G - special option

## High stability low phase noise OCXOs

### MXOCE, MXOCl, MXOCR, MXOCS models

The oscillators of the **MXOC** series are intended for a variety of modern applications with high demands to the frequency stability and phase-noise of the reference. The OCXOs utilize the module concept with the same internal structure being disposed in different standard packages on a customer requirement.

The OCXOs operate in 5-150 MHz range without frequency multiplication ensuring in (-40 +85)°C range up to 1 ppb temperature stability and to 0.1 ppb/day aging along as well as very low phase-noise level reaching -115 dBc/Hz at 1 Hz offset and -176 dBc/Hz on the floor.

As a new development of MXOC series become high-temperature oscillators operating at up to +125°C temperature range and providing 10 ppb temperature stability along with 0.3 ppb aging per day

#### Specification

Operational frequency range	5 – 150 MHz	
Input voltage	3,3 V, 5 V or 12V	
Output waveform	HCMOS, sine-wave	
Power consumption	3.5 W during warming up 1 W in steady state	
<b>Utmost parameters for</b>		
	<b>10MHz</b>	<b>100 MHz</b>
Frequency stability within (-40 +85)°C	0.5 ppb	3 ppb
Aging per day/year after 30 days operation	0.1 ppb / 15 ppb	2 ppb / 0.2 ppm
Allan deviation, 1s	$5 \times 10^{-13}$	$2 \times 10^{-11}$
Warm up time (to $\Delta f/f = 1e-7$ , at +25°C)	3 min	
Mechanical durability	Vibration 0-2000 Hz, 10g for E, I, R packages, pins Ø 0.8 mm Vibration 0-500 Hz, 10g for S and R packages, pins Ø 0.5 mm Shock 30G, 11 ms; 500G, 1 ms - optionally	
G-sensitivity	1 ppb/G 0.3 ppb/G – special option

# High stability high frequency OCXOs

## MXOHE, MXOHI, MXOHR, MXOHS series

The **MXOH** series is designed to operate in 30-300 MHz range by using internal frequency multiplication circuitry. Owing to vibration on the low frequency crystal mode the OCXOs ensure at upper operational frequencies as high as 3 ppb temperature stability, 0.5 ppb/day aging and to 5E-12/1s Allan deviation.

Like the **MXOC** oscillators the **MXOH** series utilizes the module concept where the same internal structure is disposed in different small size standard packages in accordance with customers' demands.

### Specification

Operational frequency range	30 – 300 MHz	
Input voltage	3.3 V, 5 V or 12V	
Output waveform	HCMOS, sine-wave	
Power consumption	3.5 W during warming up 1 W in steady state	
	Utmost parameters for 100MHz with multiplication by 5	Utmost parameters for 300MHz with multiplication by 3
